HORIZONTAL CENTRIFUGAL ELECTRIC PUMPS EQUIPPED WITH  MOTORS

**ErP 2009/125/CE**

 **LOWARA**  
a **xylem** brand

## Xylect

Xylect is a pump selection software with an extensive online database of product information across the entire range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

Xylect is available:

On the website – [www.xylect.com](http://www.xylect.com)

For more information, please, see page [207-208](#).

## Ecodesign Directive (ErP)

Over last decade the European Commission with the 'Energy Efficiency Plan' pushed the European Parliament and the Council to adopt specific measures to the purpose of reducing energy consumption and further negative environmental impacts.

Through the **Directives 2005/32/EC**, energy-using products (EuP), and 2009/125/EC, energy-related products (ErP) a framework for **ecodesign** requirements was established.

The Commission Regulations (EC) No 640/2009 and (EU) No 4/2014 have implemented two directives with regard to ecodesign requirements for **three-phase 50 Hz electric motors** placed on the market and put into service inside EU zone as self-alone units or integrated in other products.

This regulation states that motors must have **efficiency level IE3** (or IE2 + Variable Speed Drive) from **1 January 2015 for 7,5 to 375 kW** rated powers and from **1 January 2017 for 0,75 to 375 kW** ones.

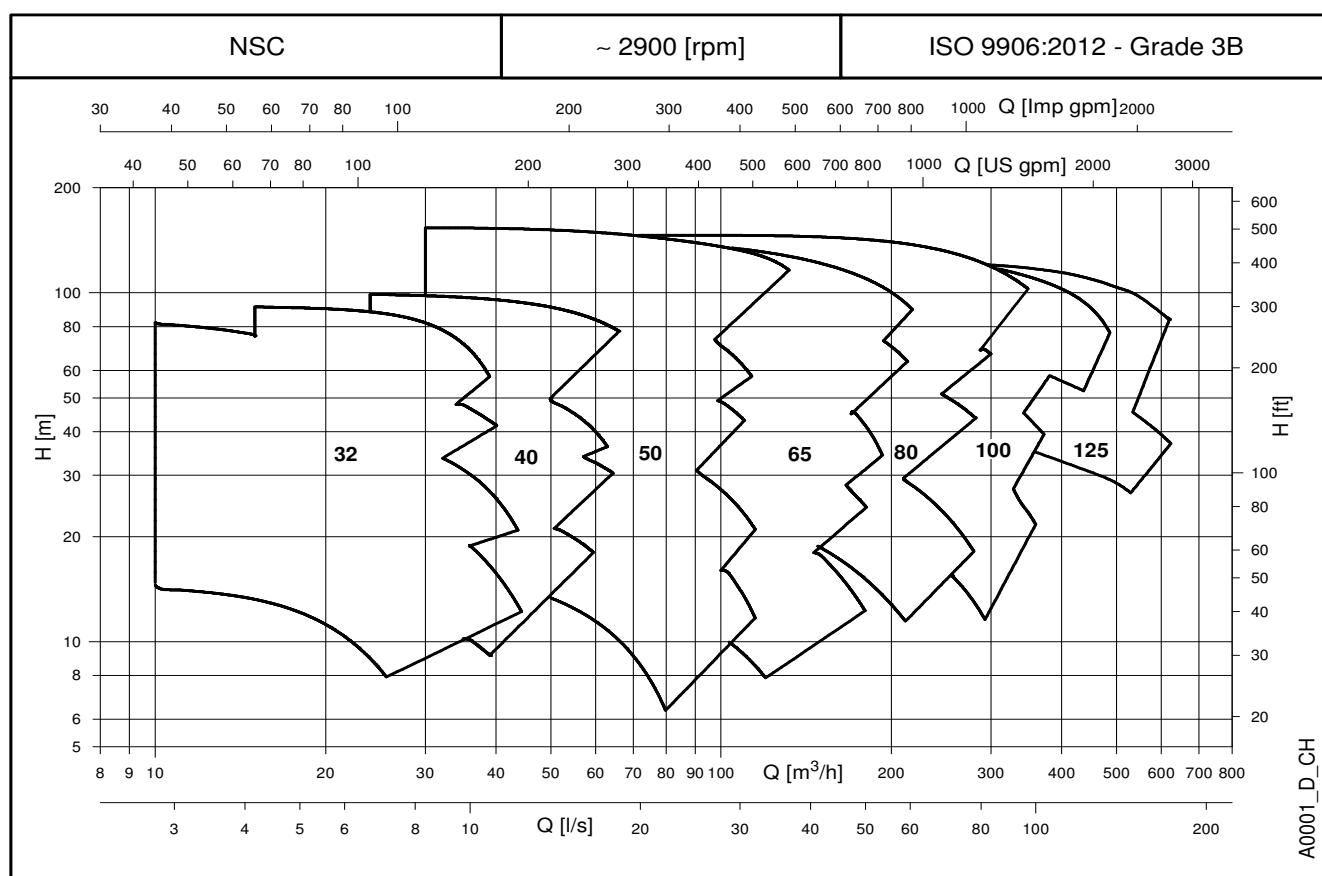

The Commission Regulation (EU) No 547/2012 has implemented two directives with regard to ecodesign requirements for some types of **clean water pumps** placed on the market and put into service inside EU zone as self-alone units or integrated in other products.

This regulation states that water pumps shall have **index MEI 0.4** as minimum from **1 January 2015**. That index comes from a dedicated formula which considers hydraulic efficiency values at 'best efficiency point' (BEP), 75 % of the flow at BEP (Part load – PL) and 110 % of the flow at BEP (Over load – OL).

**The e-NSC series, for the models in the scope of the regulations above, is ErP compliant, having an index MEI equal or higher than 0,4 and IE3 motor efficiency.**

**SUMMARY**

**e-NSC SERIES**
**HYDRAULIC PERFORMANCE RANGE AT 50 Hz, 2 POLES**

## e-NSC SERIES GENERAL INTRODUCTION

The new **e-NSC** series is the result of the close collaboration between our customers and us; the new range has been redesigned and improved to meet the Commercial Building Services (CBS) requirements, in terms of performances and energy saving.

In addition the new **e-NSC** series can be customized to meet the needs of the Industry segment, keeping the quality in the production and the continuous reliability and robustness in the operation.

### Pump design

The new **e-NSC** series is a centrifugal end-suction electro-pump with single-stage (except the two-stage NSC2 models), axial flanged suction port, radial flanged discharge and horizontal shaft. The **e-NSC** pumps have cast iron casing and impeller as standard but are also available in a wide range of materials, from bronze to duplex stainless steel, to allow for various pumping needs.

The pumps are equipped with interchangeable mechanical seals, IE3 efficiency motors, and are designed with a back pull-out configuration (impeller, adapter, and motor can be extracted without disconnecting the pump body from the piping system).

The **e-NSC** series pumps are available in the following constructions:

#### Extended shaft

Close-coupled by means of an adaptor bracket with an impeller keyed directly to the special motor shaft extension.

#### Frame mounted

Flexible-coupled with bracket, support, flexing coupling (special version with spacer on demand), aligning and anchoring base.

#### Hydraulic specifications

- Maximum delivery: up to **640** m<sup>3</sup>/h for 2 poles range.  
up to **1900** m<sup>3</sup>/h for 4 poles range.
- Maximum head: up to **154** m for 2 poles range.  
up to **100** m for 4 poles range.
- Hydraulic performance compliant with ISO 9906:2012 (Grade 3B).
- Fluid temperature range:
  - standard version (with mechanical seal BQ7EGG-WA and EPDM gasket) **-25** to **+120** °C.
  - versions on request (depending on mechanical seal and gasket) **-20\*** or **-25** to **+120** or **+140** °C.
- Maximum operating pressure:
  - standard version with mechanical seal BQ7EGG-WA and cast iron casing: **16 bar** @ 90 °C and 10 bar @ 120 °C
  - version with other mechanical seal and casing of cast iron: **16 bar** @ 120 °C and 14,9 bar @ 140 °C
  - cast ductile iron: **16 bar** @ 120 °C and 15,6 bar @ 140 °C
  - stainless steel: **16 bar** @ 50 °C and 14,8 bar @ 140 °C
  - duplex: **16 bar** @ 140 °C
- NSC2 models with mechanical seal BQ7EGG-WA and cast iron casing: **12 bar** @ 110 °C and 10 bar @ 120 °C
- see pages 22 to 25 for more information.

\* Fluoro-elastomer: FPM (old ISO), FKM (ASTM & new ISO).

#### List of the Directives

- Machinery Directive MD 2006/42/EC
- Electromagnetic Compatibility Directive EMCD 2004/108/EC
- Ecodesign requirements for energy-related products ErP 2009/125/EC, Regulation (EC) No 640/2009, Regulation (EU) No 4/2014, Regulation (EU) No 547/2012

#### Stub shaft

Rigid-coupled with a bracket, an adaptor and a rigid coupling keyed to the standard motor shaft extension.

#### Bare shaft pump

Version without driver suitable to be coupled with a standard electric motor.

- Connection dimensions according to EN 733 for models 32-125/200, 40-125/250, 50-125/250, 65-125/315, 80-160/315, 100-200/400, 125-250/400, 150-315/400

#### Motor specifications

- Squirrel cage in short circuit enclosed construction with external ventilation (TEFC).
- 2-pole and 4-pole ranges.
- **IP55** protection degree as motor (EN 60034-5), IPX5 as electro-pump (EN 60529).
- Performances according to EN 60034-1.
- **IE3** efficiency level (three-phase 0,75 to 375 kW).
- **155 (F)** insulation class.
- Standard voltage:  
1 x 220-240 V 50 Hz for power up to 2,2 kW  
3 x 220-240/380-415 V 50 Hz for power up to 3 kW  
3 x 380-415/660-690 V 50 Hz for power above 3 kW
- Maximum ambient temperature: 40 °C.

#### Note

- Anti-clockwise rotation when facing pump's suction port.
- Pump does not include counter-flanges.

#### and the main technical norms

- EN 809, EN 60204-1 (safety)
- EN 1092-2 (cast and ductile iron flanges)
- EN 1092-1 (stainless steel and duplex flanges)
- EN 61000-6-1, EN 61000-6-3
- EN 60034-30:2009, EN 60034-30-1:2014 (electric motors)

## e-NSC SERIES

### for COMMERCIAL BUILDING SERVICES (CBS) APPLICATIONS & BENEFITS

#### Applications

The **e-NSC** series is suitable for many different applications demanding reliable and efficient products that require constant or variable duty points in cost saving operation.

The e-NSC Series can be used for the following CBS applications:

- **HVAC**

- Liquid transfer in heating systems.
- Liquid transfer in air-conditioning systems.
- Liquid transfer in ventilation systems.

- **Water Supply**

- Pressure boosting in commercial buildings.
- Irrigation systems.
- Water transfer for green houses.

- **Fire Fighting**

#### Benefits

The e-NSC Series permit to achieve the following benefits.

- **Performances:** the e-NSC pumps are ErP 2015 compliant, equipped with IE3 motors and with the right hydraulic coverage for CBS applications. The standard full cast iron version with PN16 \*, 140 °C \* maximum fluid temperature and EPDM elastomer is exactly what the CBS Market needs.
- **Reliability:** the high quality in production, the robust construction and operation, the easily interchangeable mechanical seals, and wear rings guarantee a continuous operation without faults and a shorter down time for maintenance.
- **Versatility:** beside the standard offer, the e-NSC series is available in many different material configurations for casing, impeller, and elastomers as well as different construction methods to address a wide range of applications.
- **Total cost ownership:** the best hydraulic and electric efficiency, the HYDROVAR-equipped versions, the easy and quick maintenance, permit to reduce the operation and maintenance cost and to save energy when the pump is working.
- **Potable water use:** All pumps equipped with standard mechanical seal are certified for drinking water use (ACS and D.M.174/04).
- **Pre-post sales support:** we are continuously working close to our customers to help them in selecting the right pump for the specific application. An improved user-friendly selection software improved with many selection tools is available on the website, on DVD or on Apps for mobile phones. Experienced engineers are fully dedicated to big projects for Municipality.

#### Features

- Discharge ports DN32 to DN300 \*.
- Wide performance range up to 154 m head and 1900 m<sup>3</sup>/h flow.
- Nominal pressure of 16 bar \*.
- Wide range of temperatures for pumped liquids: -25°C to +140°C \*.
- Wide range of materials for many different kinds of pumped liquid.
- Wide range of voltages.
- High performance IE3 motors.
- Variable speed by optional HYDROVAR drive.

\* NSC2 models: PN12, 120 °C, suction 2", discharge 1¼".

## e-NSC SERIES for INDUSTRY APPLICATIONS & BENEFITS

### Applications

The e-NSC series and the different available configurations and standard options have been designed to cover a wide range of applications in the Industry segment. The e-NSC series can be installed in machines where compactness and high performances are a must or within industrial processes where the user looks for a robust and reliable design for the handling of many different liquids.

The e-NSC series can be used for the following Industry applications:

- **Process**

- Process cooling
- Process heating
- Heat recovery

- **Water Supply**

- Water boosting
- Water treatment
- Washing and cleaning

### Benefits

The e-NSC Series permit to achieve the following benefits:

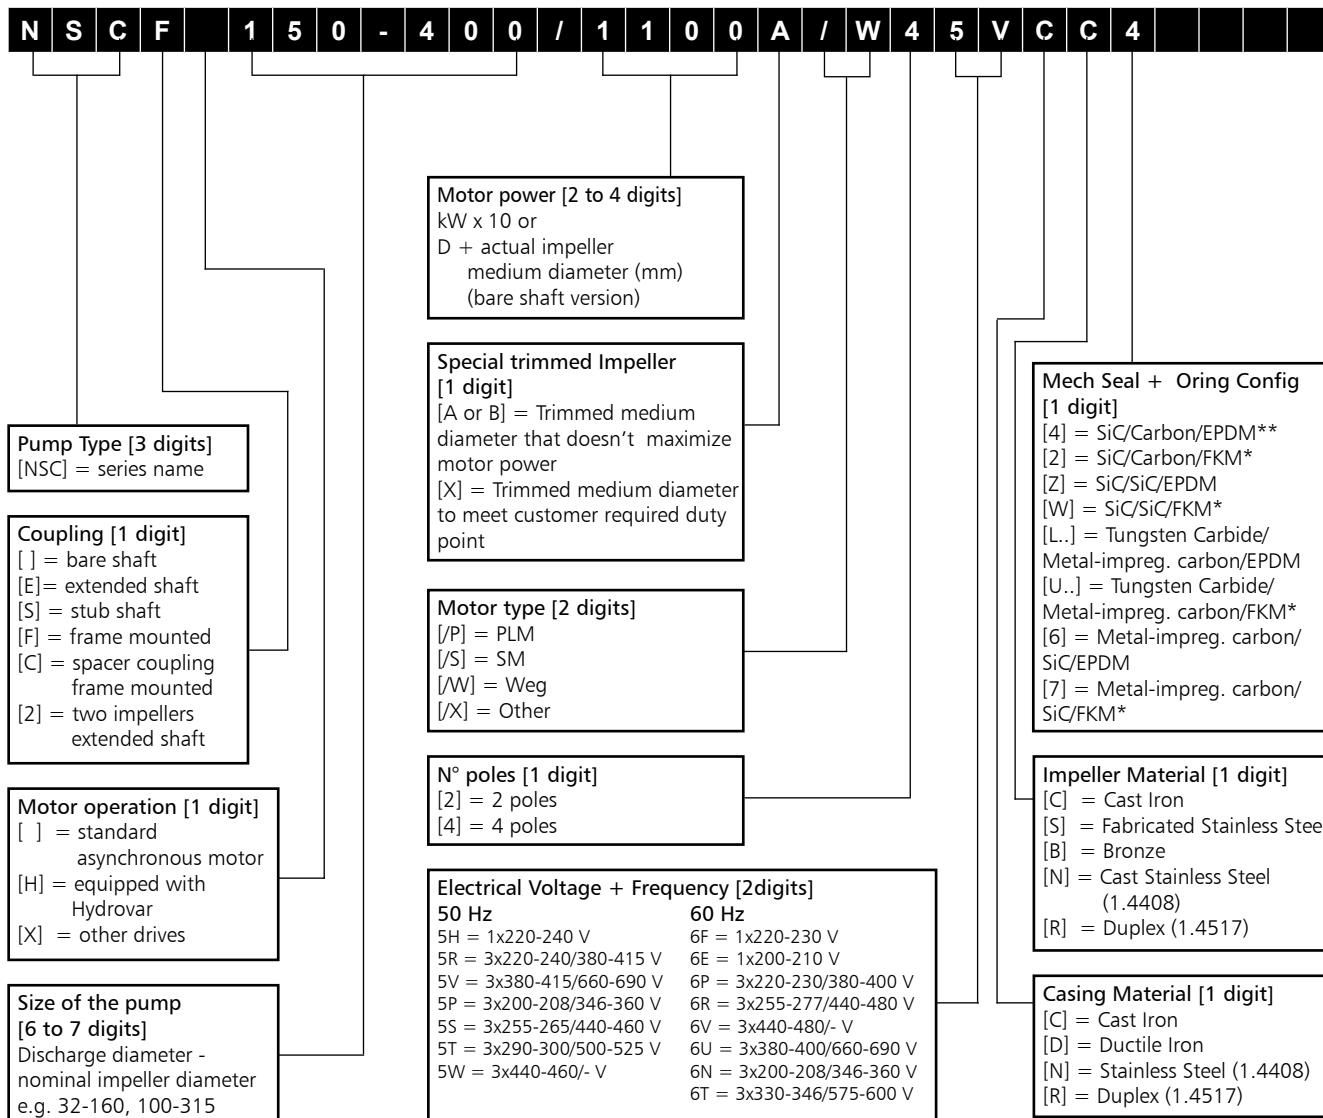

- **Efficiency:** new designed high efficiency hydraulics, IE3 motors, and the option with variable speed by the HYDROVAR drive sets the basis for very low operation costs.
- **Reliability:** various mechanical seal materials and options are available to meet the exact needs of your specific application. The e-NSC is also designed for easy maintenance and all service points are easily reachable to reduce downtime.
- **Know How:** the perfect configuration for an application can be made with the selection tool or with the support of our industrial experienced employees.
- **A global platform:** the e-NSC series are assembled in different factories across the world to make the e-NSC always "closer" to our customer. Beyond our commitment to reduce the carbon footprint of e-NSC, this global platform secures the availability of the same design with the same quality processes everywhere.

### Features

- Discharge ports DN32 to DN300 \*.
- Wide performance range up to 154 m head and 1900 m<sup>3</sup>/h flow.
- Nominal pressure of 16 bar \*.
- Wide range of temperatures for pumped liquids: -25°C to +140°C \*.
- Wide range of materials for many different kinds of pumped liquid.
- Wide range of voltages.
- High performance IE3 motors.
- Variable speed by optional HYDROVAR drive.

\* NSC2 models: PN12, 120 °C, suction 2", discharge 1 1/4".

## e-NSC SERIES IDENTIFICATION CODE

\* = FPM (old ISO), FKM (ASTM & new ISO)

\*\* [4] = SiC/Metal-impreg. carbon/EPDM for RR version

### EXAMPLES

#### NSCS 100-250/900/W25RCC4

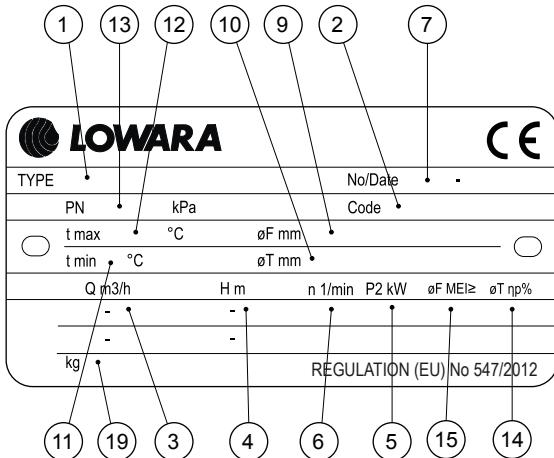

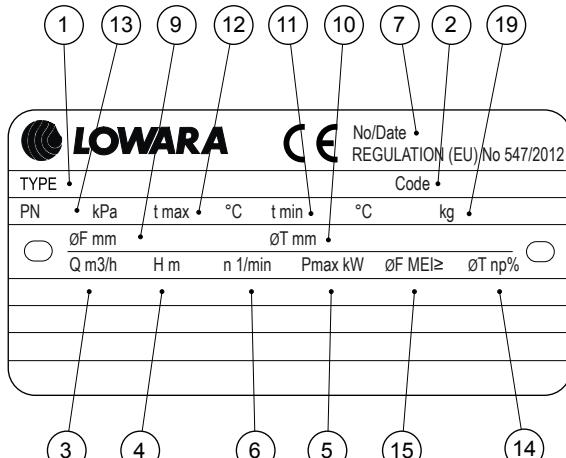

End-suction, electric pump with stub shaft coupling, DN 100 nominal discharge port, 250 mm nominal impeller diameter, 90 kW rated motor power, WEG IE3 model, 2-pole, 50 Hz 220-240/380-415 V, cast iron casing, cast iron impeller, Silicon carbide/Carbon/EPDM mechanical seal.

#### NSCF 150-400/1100A/W45VCC4

End-suction, electric pump with frame mounted coupling, DN 150 nominal discharge port, 400 mm nominal impeller diameter, 110 kW rated motor power, trimmed impeller, WEG IE3 model, 4-pole, 50 Hz 380-415/660-690 V, cast iron casing, cast iron impeller, Silicon carbide/Carbon/EPDM mechanical seal.

#### NSC 150-400/D423CCZ

End-suction, bare shaft pump, DN 150 nominal discharge port, 400 mm nominal impeller diameter, 423 mm actual impeller medium diameter, cast iron casing, cast iron impeller, Silicon carbide/ Silicon carbide/EPDM mechanical seal.

(\*) Models available also in single-phase version.

**NSC2** : Two impellers Extended shaft.

**NSCE** : Extended shaft.

**NSCS** : Stub shaft.

**NSCF** : Frame mounted.

**NSCC** : Frame mounted with spacer coupling.

**SERIE e-NSC**
**AVAILABLE MATERIALS**

Various material configurations are available to fit the needs of different pumped mediums and applications requirements. Below are the specifics regarding the material configurations and their availability for the different pump sizes. The material identification codes are the same used in the pump description (see page 8).

**MATERIAL CONFIGURATION**

| COMPONENTS                   | CS              | CC/DC     | CB/DB                  | CN/DN           | NN              | RN              | RR     |
|------------------------------|-----------------|-----------|------------------------|-----------------|-----------------|-----------------|--------|
| Volute casing                | Cast iron       |           | Cast iron/Ductile iron |                 | Stainless steel | Duplex          | Duplex |
| Impeller                     | Stainless steel | Cast iron | Bronze                 | Stainless steel |                 | Stainless steel | Duplex |
| Casing cover                 | Cast iron       |           | Cast iron/Ductile iron |                 | Stainless steel | Duplex          | Duplex |
| Stub shaft                   |                 |           | Stainless steel        |                 |                 | Duplex          |        |
| Wear ring                    |                 |           | Stainless steel        |                 |                 | Duplex          |        |
| Impeller lock nut and washer |                 |           |                        | Stainless steel |                 |                 | Duplex |
| Impeller key                 |                 |           |                        | Stainless steel |                 |                 | Duplex |
| Fill and drain plugs         |                 |           |                        | Stainless steel |                 | Duplex          |        |
| Motor adapter                |                 |           |                        |                 | Cast iron       |                 |        |

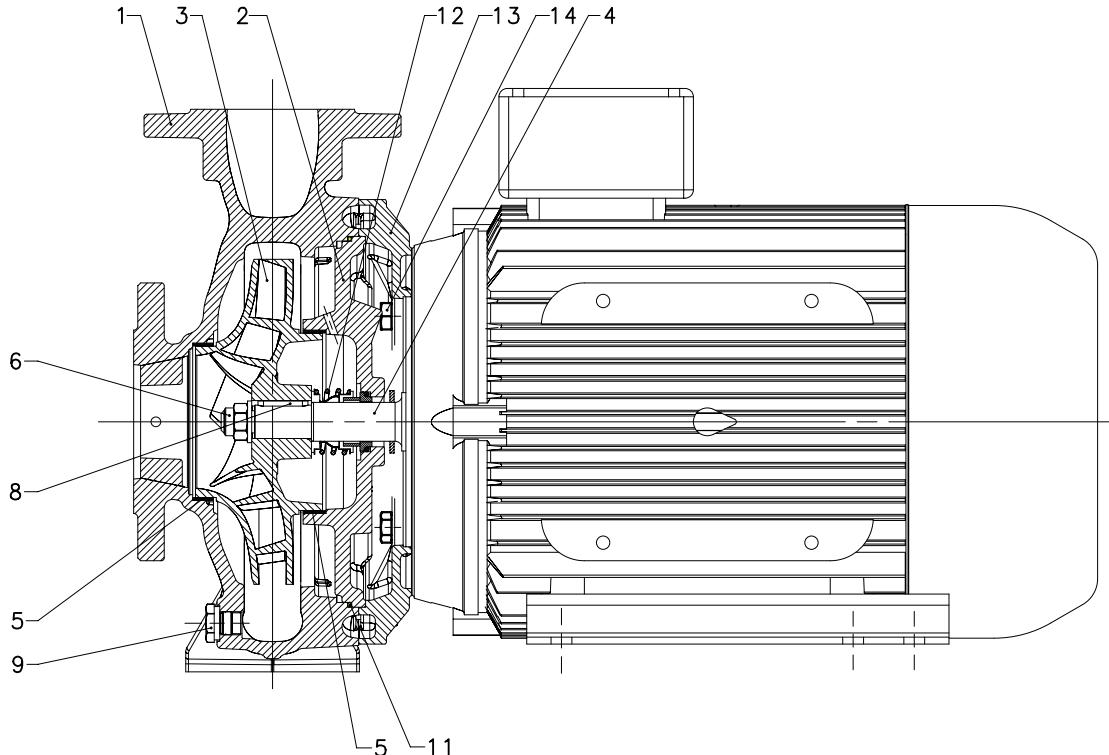

Stub shaft and wear rings in Duplex are available as an option for all pump sizes.

For further informations, see the pages [15-21](#).

## e-NSC SERIES MOTORS

With the "Energy using Products" (EuP 2005/32/EC) and "Energy related Products" (ErP 2009/125/EC) directives, the European Commission has established requirements for promoting the use of products with low power consumption.

The various products considered include **three-phase 50 Hz surface motors with power outputs ranging from 0,75 to 375 kW**, also when integrated with other products, with characteristics as defined by the specific **Regulations (EC) No 640/2009** and **(EU) No 4/2014** implementing the requirements of the EuP and ErP Directives.

In accordance with regulations, the **three-phase 50 Hz surface motors with power outputs ranging from 0,75 to 375 kW** should have IE3 as minimum level of efficiency (or IE2 fitted with variable speed drive).

- Short-circuit squirrel-cage motor, enclosed construction with external ventilation (TEFC).
- Rated power from 1,1 to 200 kW for 2-pole range and from 0,25 to 355 kW for 4-pole range.
- **IP55** protection degree.
- Insulation class **155 (F)**.
- **Standard** three-phase surface motors  $\geq 0,75$  kW supplied as **IE3**.
- IE efficiency level according to EN 60034-30:2009 and EN 60034-30-1:2014 ( $\geq 0,75$  kW).
- Electrical performances according to EN 60034-1.
- Metric cable gland according to EN 50262.

- **Standard voltage**

**Single-phase** version:

220-240 V 50 Hz

Built-in automatic reset overload protection.

**Three-phase** version:

220-240/380-415 V 50 Hz for power up to 3 kW.

380-415/660-690 V 50 Hz for power above 3 kW.

Overload protection to be provided by the user.

- **PTC included** as standard only for WEG motors (one per phase, 155°C).

- Maximum ambient temperature: 40 °C.

\* R = Reduced size of motor casing as compared to shaft extension and flange.

\*\* Operating conditions to be referred to motor only. About electric pump, refer to limits in user's manual.

For higher power motors special voltages available on request.

## e-NSC SERIES MOTOR NOISE

The tables below show the mean sound pressure levels (L<sub>p</sub>) measured at 1 meter distance in a free field according to EN ISO 11203.

The noise values are measured on 50 Hz motors and have a tolerance of 3 dB (A) according to EN ISO 4871.

### MOTORS 2 POLES 50 Hz

| POWER<br>kW | MOTOR TYPE<br>IEC SIZE | NOISE                 |

**e-NSC SERIES****PUMPS**

With the "Energy using Products" (EuP 2005/32/EC) and "Energy related Products" (ErP 2009/125/EC) directives, the European Commission has established requirements for promoting the use of products with low power consumption.

The **Commission Regulation (EU) No 547/2012** has implemented two directives with regard to ecodesign requirements for **some types of clean water pumps** placed on the market and put into service inside EU zone as self-alone units or integrated in other products.

For end-suction close-coupled pumps (ESCC for the Regulation) and end-suction own-bearing pumps (ESOB for the Regulation) the efficiency assessment refers to:

- just the pump and not the pump and motor assembly (electric or combustion);
- pumps with just one impeller;
- pumps with a nominal pressure PN not higher than 16 bar (1600 kPa);
- pumps with a minimum nominal flow not less than 6 m<sup>3</sup>/h;
- pumps with a maximum nominal power at the shaft not higher than 150 kW;
- pumps designed to operate at a speed of 2900 min<sup>-1</sup> (for electric pumps this means 50 Hz 2-pole electric motors) and with a head not greater than 140 metres;
- pumps designed to operate at a speed of 1450 min<sup>-1</sup> (for electric pumps this means 50 Hz 4-pole electric motors) and with a head not greater than 90 metres;
- use with clean water at a temperature ranging from -10°C to 120°C (the test is performed with cold water at a temperature not higher than 40°C).

According to the definitions established in the Regulation NSCE and NSCS versions correspond to the "end-suction close-coupled pump" while NSC, NSCF and NSCC versions correspond to the "end-suction own bearing pump".

This regulation states that water pumps shall have a minimum index MEI coming from a dedicated formula which considers hydraulic efficiency values at 'best efficiency point' (BEP), 75 % of the flow at BEP (Part load – PL) and 110 % of the flow at BEP (Over load – OL).

The Regulation also establishes the following deadlines.

| from                         | minimum efficiency index (MEI) |
|------------------------------|--------------------------------|
| 1 <sup>st</sup> January 2013 | MEI ≥ 0,1                      |
| 1 <sup>st</sup> January 2015 | MEI ≥ 0,4                      |

NSC2 models are out of the scope of the Regulation.

**Regulation (EU) n. 547/2012 – Annex II – point 2 (Product information requirements)**

- 1) Minimum efficiency index: see MEI values in specific tables on following page.
- 2) "The benchmark for most efficient water pumps is MEI ≥ 0,70".
- 3) Year of manufacture: 2014.
- 4) Manufacturer: Xylem Service Italia Srl - Reg. No 07520560967 - Montecchio Maggiore, Vicenza, Italy.
- 5) Product type: see the PUMP TYPE column in the tables in the *Hydraulic performance* section.
- 6) Hydraulic pump efficiency with trimmed impeller: see  $\eta_p$  and Ø columns in the tables in the *Hydraulic performance* section.
- 7) Pump performance curves, including the performance curve: see the *Operating Characteristics* graphs in the following pages.
- 8) "The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter".
- 9) "The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable speed drive that matches the pump duty to the system".
- 10) Information relevant for disassembly, recycling or disposal at end-of-life: observe the current laws and by-laws governing sorted waste disposal. Consult the product operating manual.
- 11) "Designed for use below - 10 °C only": note not applicable to these products.
- 12) "Designed for use above 120 °C only": note not applicable to these products.
- 13) Specific instructions for pumps as per points 11 and 12: not applicable to these products.
- 14) "Information on benchmark efficiency is available at": [www.europump.org](http://www.europump.org) (Ecodesign section).
- 15) The benchmark efficiency graphs with MEI = 0.7 and MEI = 0.4 are available at [www.europump.org](http://www.europump.org), Ecodesign, Efficiency charts (refer to "ESCC 1450 rpm", "ESCC 2900 rpm", "ESOB 1450 rpm", "ESOB 2900 rpm").

**OPERATING CHARACTERISTICS AT 50 Hz, 4 POLES**

The NPSH values are laboratory values; for practical use we suggest increasing these values by 0,5 m.  
These performances are valid for liquids with density  $\rho = 1,0 \text{ Kg/dm}^3$  and kinematic viscosity  $v = 1 \text{ mm}^2/\text{sec}$ .

NOTE: Pumps with flanges according to EN 1092-2 as standard.

Nscc200-300\_4p50-en\_d\_td

Available ASME B16.5 version on request. For flanges dimensions see drawing.

**e-NSC SERIES**
**FORCES AND MOMENTS AT PUMP FLANGES**

Forces at the pump flanges calculated according to EN ISO 5199:2002.

When the applied loads do not all attain the maximum values allowed, one of these loads may exceed the normal limit, provided that the following supplementary conditions are satisfied:

- any component of a force or of a moment shall be limited to 1,4 times the maximum allowable value;
- the actual forces and moments acting on each flange are governed by the following formula:

$$\left(\frac{\sum|F_{x,y,z}|}{\sum|F_{max}|}\right)^2 + \left(\frac{\sum|M_{x,y,z}|}{\sum|M_{max}|}\right)^2 \leq 2$$

# **NSC with VARIABLE FREQUENCY DRIVE**

## **ECODESIGN DIRECTIVE (ErP)**

The Ecodesign directive was put in place in 2011 and introduced minimum requirements for the efficiency of **AC motors and pumps**. Over the last few years, these requirements have been gradually intensified.

In 2014, with the standard EN 50598, there was a switch in the definition of efficiency class from an individual component approach towards an overall system one; which is the basic point for the "Extended product approach" (EPA). Taking this concept further, the EN50598-2 introduced IES efficiency classes for frequency converters + motor systems (known as power drive systems-PDS) with power rating **from 0.12 kW to 1000kW and from 100V to 1000V**. For Power Drive System (PDS) the defined efficiency classes are IES0, IES1, IES2. If a PDS has 20% greater losses than the reference value of IES1 then it is classified as IES0; if it has 20% lower losses than the reference value of IES1 then it is classified as IES2.

- **With the HYDROVAR connected to a Lowara IE3 motor, the system achieves the highest IES class – IES2.**

**The e-NSC pump series is therefore already ready for the 2020 EU Ecodesign energy efficiency objectives.**

# **NSC..H**

## **e-NSC WITH HYDROVAR**

## NSC..H SERIES

### NSC WITH HYDROVAR

#### Background and context

For all pumping needs in commercial or residential building and in industry applications, the demand for intelligent pumping systems is constantly growing. Controlled systems offer many advantages: reduced operating costs for the lifetime of the pump, lower environmental impact, longer lifetime of piping systems and networks.

For this reason, Lowara has developed the NSC..H: an intelligent pumping system which assures high level performance with energy consumption tailored to the system's demand.

According to the EN 50598-2 standard the NSC..H is an IES2 power drive system, the highest efficiency class defined for this category.

#### Benefits of e-NSC with HYDROVAR

**Saving:** NSC..H transforms the NSC pumps into variable speed intelligent pumping systems. Thanks to the HYDROVAR, the speed of each pump varies so as to maintain a constant flow, a constant pressure, or a differential pressure. In doing so, at any point in time, the pump only receives the energy required. This in turns allows for considerable savings, especially for systems that have varying loads throughout the day.

**Easy installation and space-saving:** NSC..H saves time and space during installation. The Hydrovar is delivered already mounted on the motor (for models up to 22kW). The hydrovar is kept cool by the motor fan and does not require a control panel. In order to function, only fuses on the supply line are needed (Check your local electrical installation regulations).

**Standard motors:** NSC..H models are fitted with three-phase standard TEFC motors with insulation class 155 (F).

#### Identification code:

NSC..H models are identified by the letter "H" and the last two characters.

Examples:

NSCE**H**80-160/22/P45RCC4 **/2**

NSCE**H**50-250/22/P45RCS4 **/3**

NSCS**H**50-200/185/P25VCSZ **/4**

**H** = with integrated HYDROVAR

**/2** = HYDROVAR HVL**2**.022 1~ 208-240 V (50/60 Hz)

**/3** = HYDROVAR HVL**3**.022 3~ 208-240 V (50/60 Hz)

**/4** = HYDROVAR HVL**4**.022 3~ 380-460 V (50/60 Hz)

#### Key Features of the HYDROVAR

- **No need for additional pressure sensors:**

The NSC..H is fitted with a pressure transmitter or differential pressure transmitters, depending on the application.

- **No need for special pumps or motors.**

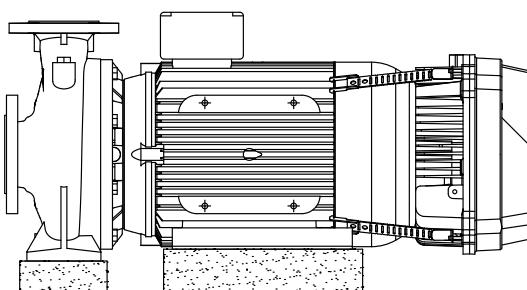

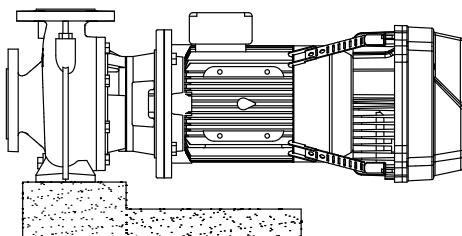

- **NSC..H is already pre-wired.**

- **No need for bypass or safety systems:**

The NSC..H will immediately switch off when demand drops to zero or when it exceeds maximum pump capacity; thus making installation of additional safety devices unnecessary.

- **Anti-condensation device:**

The HYDROVAR is fitted with anti-condensation devices which switch on when the pump is in standby in order to prevent condensation forming in the unit.

NSC-HVL\_A\_SC

## NSC..H SERIES

### (e-NSC WITH HYDROVAR)

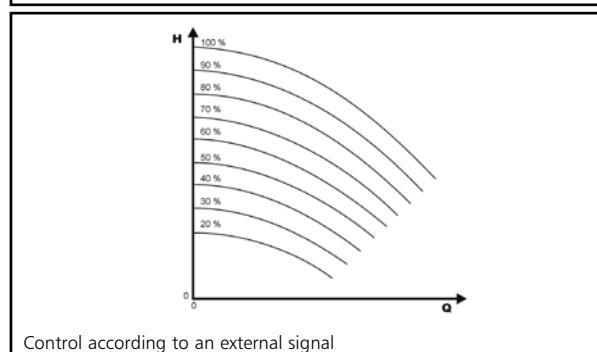

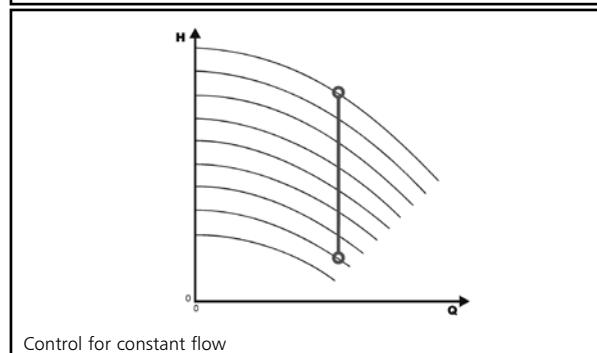

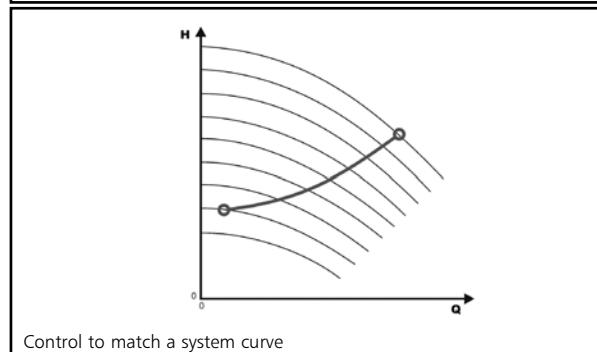

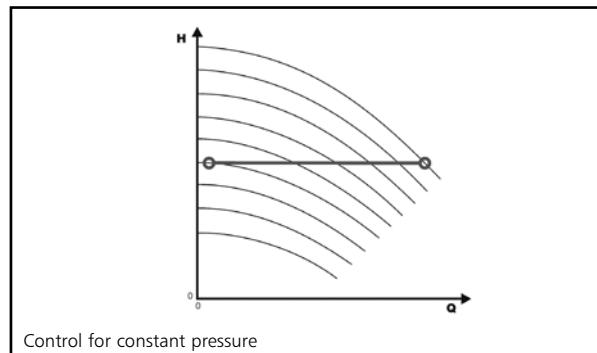

The basic function of the HYDROVAR device is to control the pump to meet the system demands.

#### **HYDROVAR performs these functions by:**

- 1) Measuring the system pressure or flow via a transmitter mounted on the pump's delivery side.
- 2) Calculating the motor speed to maintain the correct flow or pressure.
- 3) Sending out a signal to the pump to start the motor, increase speed, decrease speed or stop.
- 4) In the case of multiple pump installations, HYDROVAR will automatically provide for the cyclic changeover of the pumps' starting sequence.

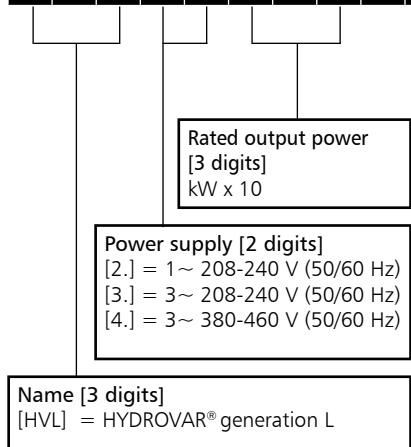

In addition to these basic functions, HYDROVAR can perform controls only manageable by the most advanced computerized control systems. Some examples are:

- Stop the pump(s) at zero demand.
- Stop the pump(s) in case of water failure on the suction side (protection against dry running).
- Stop the pump if the required delivery exceeds the pump's capacity (protection against cavitation caused by excessive demand), or automatically switch on the next pump in a multiple series.
- Protect the pump and motor from over-voltage, under-voltage, overload, and earth fault.
- Vary the pump speed: acceleration and deceleration time.
- Compensate for increased flow resistance at high flow rates.
- Conduct automatic tests at set intervals.
- Monitor the converter and motor operating hours.
- Display the energy consumption (kWh).
- Display all functions on an LCD in different languages (Italian, English, French, German, Spanish, Portuguese, Dutch, etc...).
- Send a signal to a remote control system which is proportional to the pressure and frequency.
- Communicate with external control system via Modbus (RS 485 interface) and Bacnet as standard.

## HYDROVAR HVL IDENTIFICATION CODE

H | V | L | 4 | . | 0 | 7 | 5 | - | A | 0 | 0 | 1 | 0

**EXAMPLE: HVL4.075-A0010**

**HVL**=HYDROVAR generation L, **4.**=3~ 380-460 V power supply, **075**=7,5kW rated output power, **A**=IP55 (Type1) enclosure class, **0**=Standard Bus communication, **0**=no optional card, **1**=internal display installed, **0**=no other options installed.  
NOTE: HYDROVAR output voltage is three phase.

Other options [1 digit]  
[0] = reserved for future use

Display [1 digit]  
[0] = reserved for future use  
[1] = Internal display installed as standard

Optional cards [1 digit]  
[0] = no optional cards (as standard)  
[1] = Premium Card (option supplied loose)

Bus communication [1 digit]  
0 = Standard Communication (Modbus, Bacnet)  
1 = reserved for future use  
2 = reserved for future use  
3 = reserved for future use  
4 = reserved for future use  
5 = reserved for future use  
6 = reserved for future use

Enclosure class (IP class) [1 digit]  
[A] = IP55 (Type1)  
[B] = reserved for future use

## **HYDROVAR HVL EMC COMPATIBILITY**

### **EMC requirements**

HYDROVAR fulfills the product standard EN61800-3:2004 + A1:2012, which defines categories (C1 to C4) for device application areas.

Depending on the motor cable length, a classification of HYDROVAR by category (based on EN61800-3) is reported in the following tables:

| HVL           | HYDROVAR classification by categories based on EN61800-3 |
|---------------|--|
| 2.015 ÷ 2.040 | C1 (*)   |
| 3.015 ÷ 3.110 | C2 (*)   |
| 4.015 ÷ 4.220 | C2 (*)   |

(\*) 0,75 motor cable length; contact Xylem for further information

En-Rev\_A

## **CARD**

### **Premium Card HYDROVAR**

For the NSC..H the Premium Card comes fitted as standard on the standalone HYDROVAR.

This allows to control up to five fix speed pumps via an external panel.

The Premium Card will allow additional features listed below:

- 2 additional Analog Inputs
- 2 Analog Outputs
- 1 additional digital input
- 5 relays.

## **OPTIONAL COMPONENTS**

### **Sensors**

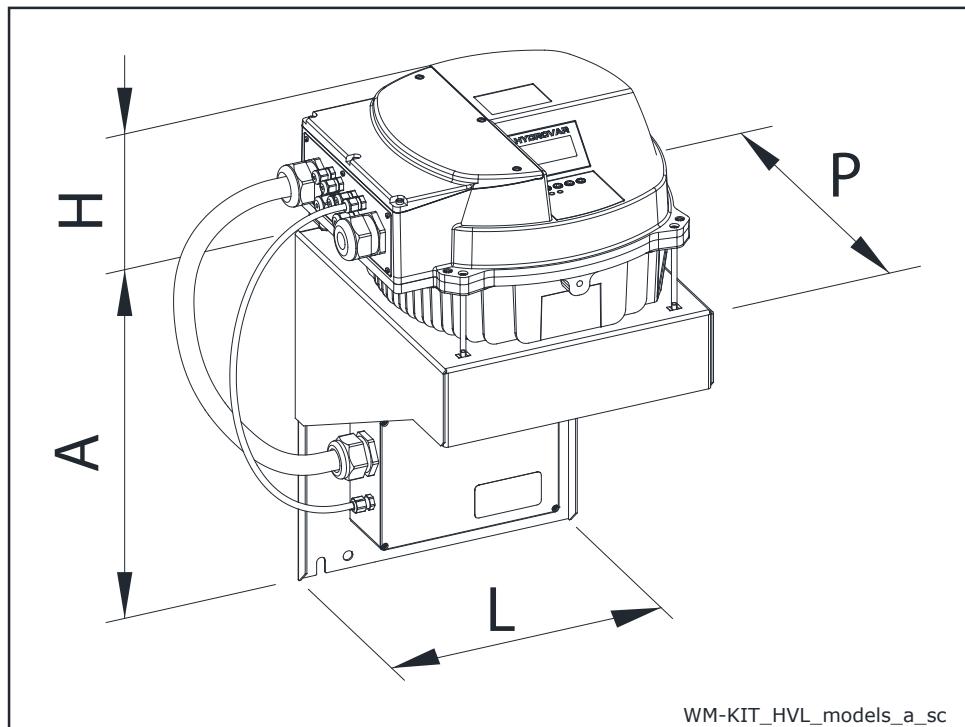

The following sensors are available for HYDROVAR:

- a. Pressure-transducer
- b. Differential pressure-transducer
- c. Temperature-sensor
- d. Flow indicator (orifice plate, inductive flow meter)
- e. Level-sensor.

## HYDROVAR HVL (WALL MOUNTING KIT)

### DIMENSIONS AND WEIGHTS

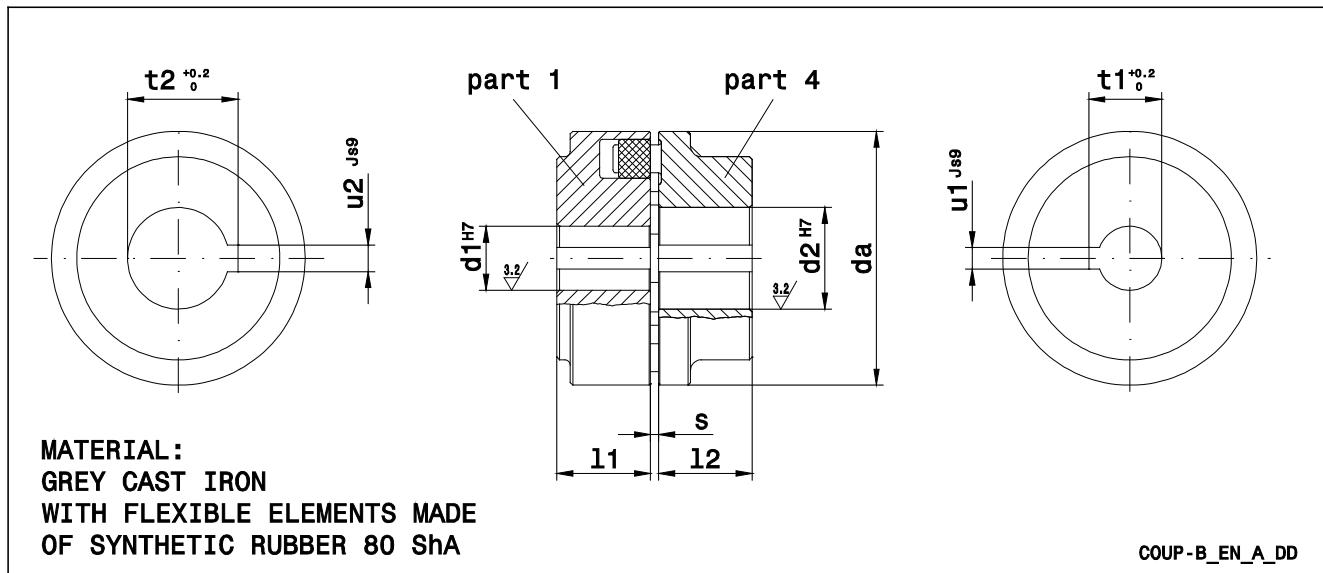

As an option a HYDROVAR wall mounting kit is also available, this is used where mounting on the pump unit is impossible or where you would like the controls in another location, these are available for the new generation HYDROVAR HVL 2.015-4.220 (22 kW). The speed of the cooling fan modulates with the HYDROVAR usage which optimizes energy consumption and also reduces noise.

# **REPORTS AND DECLARATIONS**

## REPORTS AND DECLARATIONS

### i) Test reports

#### a) Factory Test Report

- Test report compiled at the end of the assembly line, including flow-head performance test (ISO 9906:2012 – Grade 3B) and hydrostatic pressure test.

#### b) Audit Test Report

- Test report for electric pumps compiled in the test room, comprising flow-head-pump input-pump efficiency performance test (according to ISO 9906:2012)

#### c) NPSH Test Report

- Test report for electric pumps compiled in the test room, comprising flow-NPSH performance test (according to ISO 9906:2012)

#### d) Noise Test Report

- Report indicating sound pressure and power measurements (EN ISO 20361, EN ISO 11203, EN ISO 4871)

#### e) Vibration Test Report

- (unavailable for submerged or submergible pumps)
- Report indicating vibration measurements (ISO 10816-1)

### ii) Declaration of product conformity with the technical requirements indicated in the order

#### a) EN 10204:2004 - type 2.1

- does not include test results on supplied or similar products.

#### b) EN 10204:2004 - type 2.2

- includes test results (materials certificates) on similar products.

### iii) Issue of a further EC Declaration of Conformity,

- in addition to the one accompanying the product, it comprises references to European law and the main technical standards (e.g.: MD 2006/42/EC, EMCD 2004/108/EC, ErP 2009/125/EC).

*N.B.: if the request is made after receipt of the product, communicate the code (name) and serial number (date + progressive number).*

### iv) Manufacturer's declaration of conformity

- relative to one of more types of products without indicating specific codes and serial numbers.

### v) Other certificates and/or documentation on request

- subject to availability or feasibility.

### vi) Duplication of certificates and/or documentation on request

- subject to availability or feasibility.

# **TECHNICAL APPENDIX**

## NPSH

The minimum operating values that can be reached at the pump suction end are limited by the onset of cavitation.

Cavitation is the formation of vapour-filled cavities within liquids where the pressure is locally reduced to a critical value, or where the local pressure is equal to, or just below the vapour pressure of the liquid.

The vapour-filled cavities flow with the current and when they reach a higher pressure area the vapour contained in the cavities condenses. The cavities collide, generating pressure waves that are transmitted to the walls. These, being subjected to stress cycles, gradually become deformed and yield due to fatigue. This phenomenon, characterized by a metallic noise produced by the hammering on the pipe walls, is called incipient cavitation.

The damage caused by cavitation may be magnified by electrochemical corrosion and a local rise in temperature due to the plastic deformation of the walls. The materials that offer the highest resistance to heat and corrosion are alloy steels, especially austenitic steel. The conditions that trigger cavitation may be assessed by calculating the total net suction head, referred to in technical literature with the acronym NPSH (Net Positive Suction Head).

The NPSH represents the total energy (expressed in m.) of the liquid measured at suction under conditions of incipient cavitation, excluding the vapour pressure (expressed in m.) that the liquid has at the pump inlet.

To find the static height  $h_z$  at which to install the machine under safe conditions, the following formula must be verified:

$$hp + h_z \geq (NPSH_r + 0.5) + hf + hp_v \quad ①$$

where:

**hp** is the absolute pressure applied to the free liquid surface in the suction tank, expressed in m. of liquid;  $hp$  is the quotient between the barometric pressure and the specific weight of the liquid.

**hz** is the suction lift between the pump axis and the free liquid surface in the suction tank, expressed in m.;  $h_z$  is negative when the liquid level is lower than the pump axis.

**hf** is the flow resistance in the suction line and its accessories, such as: fittings, foot valve, gate valve, elbows, etc.

**hpv** is the vapour pressure of the liquid at the operating temperature, expressed in m. of liquid.  $hp_v$  is the quotient between the Pv vapour pressure and the liquid's specific weight.

**0,5** is the safety factor.

The maximum possible suction head for installation depends on the value of the atmospheric pressure (i.e. the elevation above sea level at which the pump is installed) and the temperature of the liquid.

To help the user, with reference to water temperature ( $4^\circ C$ ) and to the elevation above sea level, the following tables show the drop in hydraulic pressure head in relation to the elevation above sea level, and the suction loss in relation to temperature.

|                               |     |     |     |     |     |      |      |
|-------------------------------|-----|-----|-----|-----|-----|------|------|
| <b>Water temperature (°C)</b> | 20  | 40  | 60  | 80  | 90  | 110  | 120  |
| <b>Suction loss (m)</b>       | 0,2 | 0,7 | 2,0 | 5,0 | 7,4 | 15,4 | 21,5 |

|                                      |      |      |      |      |      |      |
|--------------------------------------|------|------|------|------|------|------|
| <b>Elevation above sea level (m)</b> | 500  | 1000 | 1500 | 2000 | 2500 | 3000 |
| <b>Suction loss (m)</b>              | 0,55 | 1,1  | 1,65 | 2,2  | 2,75 | 3,3  |

Friction loss is shown in the tables Flow Resistance of this catalogue. To reduce it to a minimum, especially in cases of high suction head (over 4-5 m.) or within the operating limits with high flow rates, we recommend using a suction line having a larger diameter than that of the pump's suction port. It is always a good idea to position the pump as close as possible to the liquid to be pumped.

Make the following calculation:

Liquid: water at  $\sim 15^\circ C$   $\gamma = 1 \text{ kg/dm}^3$

Flow rate required:  $25 \text{ m}^3/\text{h}$

Head for required delivery: 70 m.

Suction lift: 3,5 m.

The selection is an 33SV3G075T pump whose NPSH required value is, at  $25 \text{ m}^3/\text{h}$ , of 2 m.

For water at  $15^\circ C$

$hp = Pa / \gamma = 10,33 \text{ m}$ ,  $hp_v = Pv / \gamma = 0,174 \text{ m}$  (0,01701 bar)

The Hf flow resistance in the suction line with foot valves is  $\sim 1,2 \text{ m}$ .

By substituting the parameters in formula ① with the numeric values above, we have:

$$10,33 + (-3,5) \geq (2 + 0,5) + 1,2 + 0,17$$

from which we have:  $6,8 > 3,9$

The relation is therefore verified.

hr = flow resistance for 100 m of straight pipeline (m)

G-at-pct-en\_b\_th

V = water speed (m/s)

## FLOW RESISTANCE

### TABLE OF FLOW RESISTANCE IN BENDS, VALVES AND GATES

The flow resistance is calculated using the equivalent pipeline length method according to the table below:

| ACCESSORY<br>TYPE  | DN                             |     |     |     |     |     |     |     |     |     |      |      |
|--------------------|--------------------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|
|                    | 25                             | 32  | 40  | 50  | 65  | 80  | 100 | 125 | 150 | 200 | 250  | 300  |
|                    | Equivalent pipeline length (m) |     |     |     |     |     |     |     |     |     |      |      |
| 45° bend           | 0,2                            | 0,2 | 0,4 | 0,4 | 0,6 | 0,6 | 0,9 | 1,1 | 1,5 | 1,9 | 2,4  | 2,8  |
| 90° bend           | 0,4                            | 0,6 | 0,9 | 1,1 | 1,3 | 1,5 | 2,1 | 2,6 | 3,0 | 3,9 | 4,7  | 5,8  |
| 90° smooth bend    | 0,4                            | 0,4 | 0,4 | 0,6 | 0,9 | 1,1 | 1,3 | 1,7 | 1,9 | 2,8 | 3,4  | 3,9  |
| Union tee or cross | 1,1                            | 1,3 | 1,7 | 2,1 | 2,6 | 3,2 | 4,3 | 5,3 | 6,4 | 7,5 | 10,7 | 12,8 |
| Gate valve         | -                              | -   | -   | 0,2 | 0,2 | 0,2 | 0,4 | 0,4 | 0,6 | 0,9 | 1,1  | 1,3  |
| Foot check valve   | 1,1                            | 1,5 | 1,9 | 2,4 | 3,0 | 3,4 | 4,7 | 5,9 | 7,4 | 9,6 | 11,8 | 13,9 |
| Non return valve   | 1,1                            | 1,5 | 1,9 | 2,4 | 3,0 | 3,4 | 4,7 | 5,9 | 7,4 | 9,6 | 11,8 | 13,9 |

G-a-pcv-en\_b\_th

The table is valid for the Hazen Williams coefficient C=100 (cast iron pipework);

for steel pipework, multiply the values by 1,41;

for stainless steel, copper and coated cast iron pipework, multiply the values by 1,85;

When the **equivalent pipeline length** has been determined, the flow resistance is obtained from the table of flow resistance.

The values given are guideline values which are bound to vary slightly according to the model, especially for gate valves and non-return valves, for which it is a good idea to check the values supplied by manufacturers.

## FURTHER PRODUCT SELECTION AND DOCUMENTATION

### Xylect

Xylect is pump solution selection software with an extensive online database of product information across the entire Lowara range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

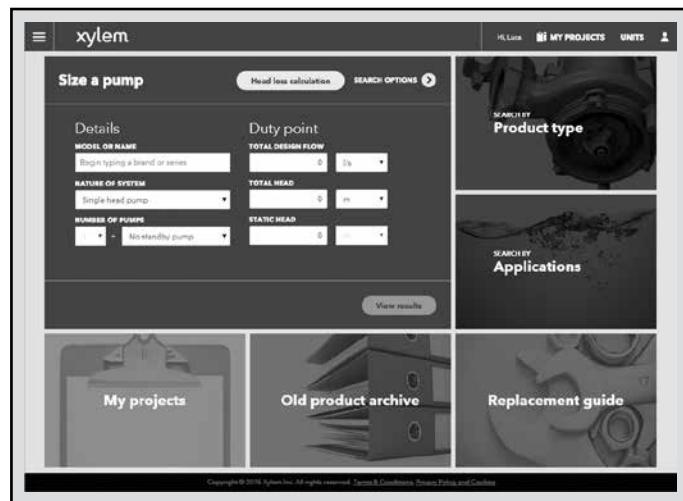

The possibility to search by applications and the detailed information output given makes it easy to make the optimal selection without having detailed knowledge about the Lowara products.

The search can be made by:

- Application
- Product type
- Duty point

Xylect gives a detailed output:

- List with search results
- Performance curves (flow, head, power, efficiency, NPSH)
- Motor data
- Dimensional drawings
- Options
- Data sheet printouts
- Document downloads incl dxf files

*The search by application guides users not familiar with the product range to the right choice.*

## FURTHER PRODUCT SELECTION AND DOCUMENTATION

### Xylect

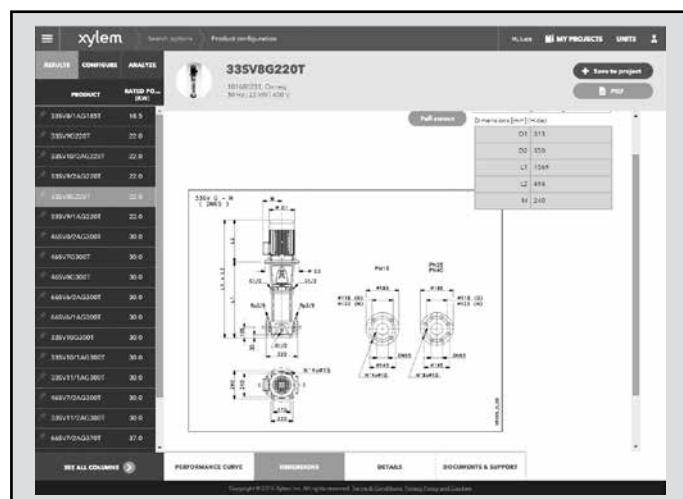

The detailed output makes it easy to select the optimal pump from the given alternatives.

The best way to work with Xylect is to create a personal account. This makes it possible to:

- Set own standard units
- Create and save projects
- Share projects with other Xylect users

Every registered user has a proper space, where all projects are saved.

For more information about Xylect please contact our sales network or visit [www.xylect.com](http://www.xylect.com).

Dimensional drawings appear on the screen and can be downloaded in dxf format.

# Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services settings. Xylem also provides a leading portfolio of smart metering, network technologies and advanced analytics solutions for water, electric and gas utilities. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.
